# Overview of TPM<sup>+</sup> product range

The TPM<sup>+</sup> product range impresses! With its dynamics, torque and torsional rigidity. Combined with an extremely short overall length, high power density and superior running on a completely new level together with practical graduated performance settings that ensure greater operating efficiency in all your production applications.

## Product declarations

### Actuators

The TPM<sup>+</sup> product range is above all dynamic and compact. Servo motors and gearheads merge seamlessly into a single versatile unit. The benefit: Maximum power density meets functional design.

### Motor

Outstanding performance: Rare earth magnets, a high pole count and a high fill factor in the permanent magnet excited synchronous servo motors result in high power density with barely discernible cogging torques.

### Gearhead

The planetary gearheads offer minimal backlash while achieving a high degree of torsional and tilting rigidity. The smooth-running helical teeth guarantee silent operation.

## More productive. More efficient. More precise.

### More productive ...

The benefits for your machines and plants: An actuator with a low moment of inertia and an extremely rigid drive train provide for the highest precision and dynamics. A decisive increase in productivity.

### More efficient ...

Low torsional backlash, an output bearing with a high degree of tilting rigidity and integration of the gearhead pinion in the motor shaft result in: smaller motors, reduced energy consumption and lower investment costs.

### More precise ...

Low levels of operating noise due to helical teeth and outstanding control properties ensure greater precision in your machines and plants. The result: genuinely economical products.

### Further features

- |  |   |   |
|--|---|---|
| - Different encoder systems and permanent magnet holding brake available.                                    | - UL version as standard.   | - Torsional backlash reduction to less than 1 arcmin possible.            |
| - Direct attachment of drive components (pinion, belt pulley, indexing table) to standardized output flange. | - Pre-assembled cables for selected servo controllers available.                        | - Electrical connection via time-saving bayonet couplings.                |
|  | - Simple commissioning through special instructions for more than 25 servo controllers. | - Robust output bearing eliminates the need for additional bearing point. |

### **TPM+ dynamic**

#### **More dynamic – Shorter – Quieter**

Extra productivity: Outstanding dynamics, compact dimensions and extremely smooth running. Actuator with two-stage gearhead designed primarily for rotary applications.

### **TPM+ power**

#### **Stronger – Quieter – More compact**

Extra power: High torque, compact dimensions. Single or two-stage motor/gearhead combination for linear and rotary applications.

### **TPM+ high torque**

#### **Stronger – More compact – Higher torsional rigidity**

The uncompromising plus: High torsional rigidity and superior power density. Two or three-stage servo actuator for heavy-duty applications.

# TPM<sup>+</sup> servo actuators

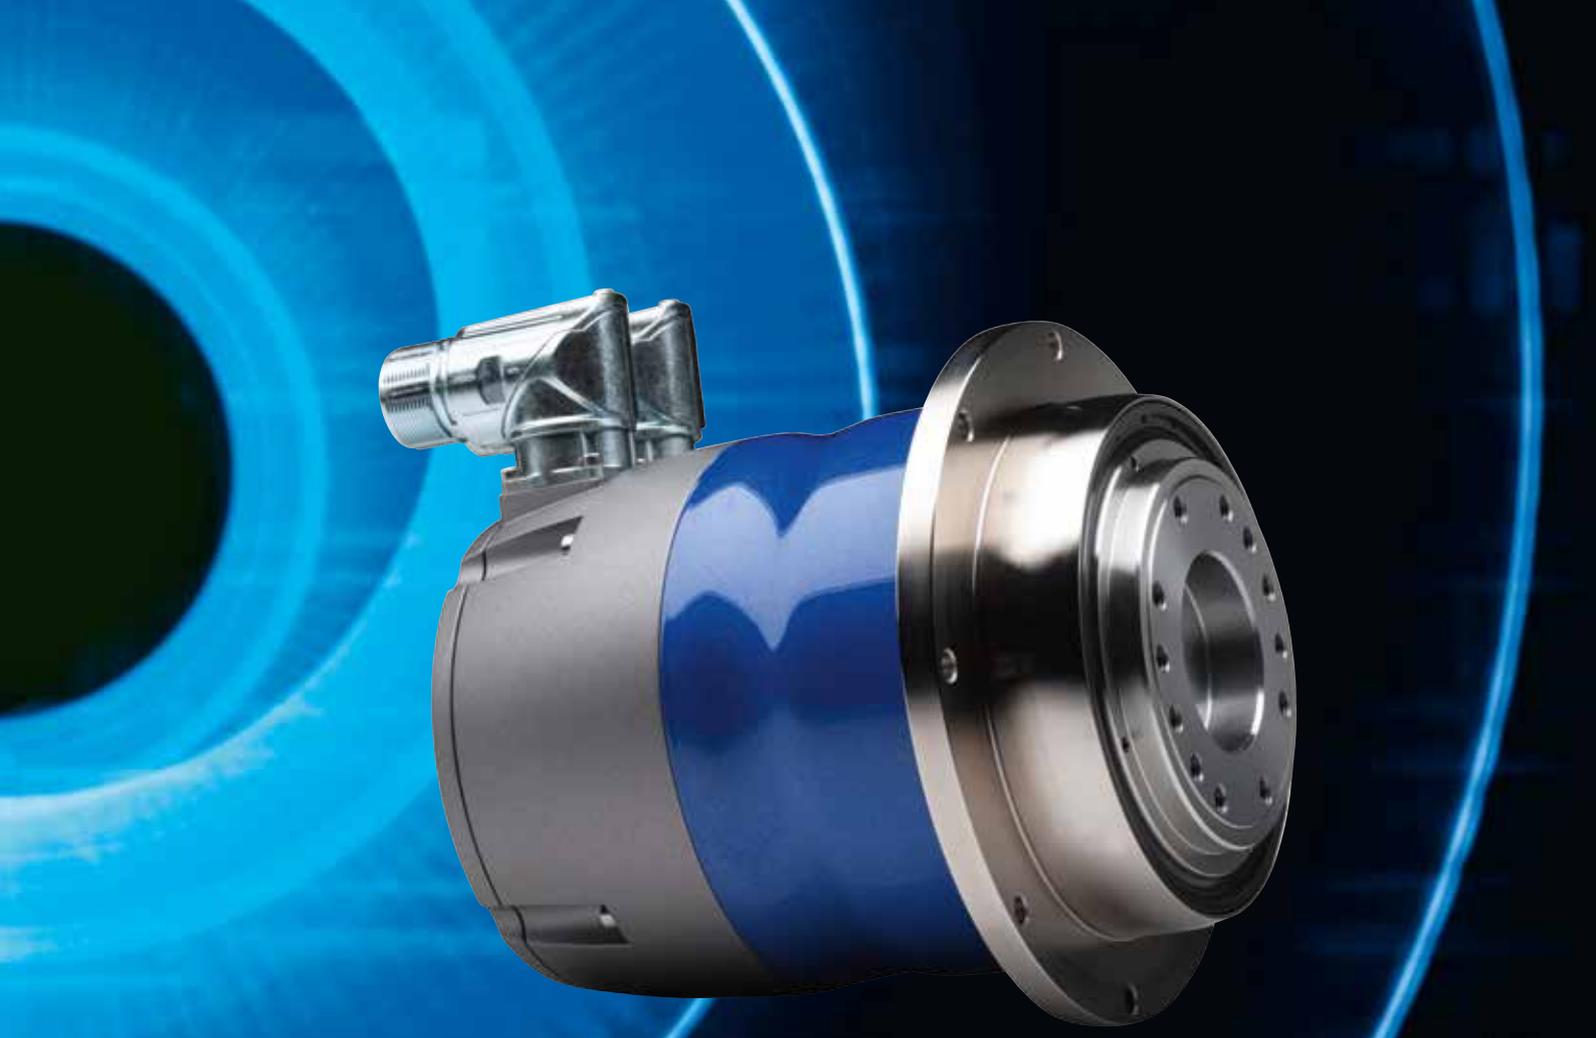

# TPM<sup>+</sup> dynamic

## More dynamic. Shorter. Quieter.

Experience extraordinary dynamics through modern motor technology with high power density, a low moment of inertia and optimal torsional rigidity. Benefit from a reduced installation length: The coupling-free connection between motor and gearhead and the space-saving attachment of motor instruments make the TPM<sup>+</sup> dynamic over 50 percent more compact than conventional gearhead motors. Helical-toothed precision planetary gearheads ensure low-vibration and silent operation.

## Applications

Whether used as an axle drive on spraying robots, a swivel drive in the production of optical media and semiconductors, in packaging machines or as a drive for changeover systems in machine tools or wood processing systems, the TPM+dynamic is ideal for all robotic and automated applications.

Size	Installation length in mm	Acceleration torque in Nm	Max. power in kW
004	from 113	up to 40	up to 1.0
010	from 142	up to 100	up to 1.5
025	from 153	up to 300	up to 4.7
050	from 187	up to 650	up to 10.2
110	from 268	up to 1300	up to 14.2

# TPM+ high torque

Stronger. More compact. Higher torsional rigidity.

This servo actuator brings you further advancement: with 50% more torque and improved performance. Even better power transmission due to the more rigid drive train enables higher acceleration and shorter cycle times. Effectiveness from which you benefit. An additional planet in the gearbox significantly increases the torsional rigidity of the particularly short and light actuator. The coupling-free integration of motor and gearhead and the efficient attachment of motor instruments is the formula for success.

## Applications

Thanks to the TPM\* high torque, processing machines and swivel axes become significantly more productive. The high torsional rigidity and the ample torque reserve in the case of disturbing forces ensure extremely stable drive control. The reliable servo actuator therefore guarantees dynamics and precision for your (heavy-duty) tasks.

Size	Installation length in mm	Acceleration torque in Nm	Max. power in kW

# TPM+ power

## Stronger. More compact. Quieter.

Generate more power: More torque, high capability. A perfect combination of motors and efficient planetary gearheads makes light work of even the most difficult motion applications. 40 percent more compact due to coupling-free connection of motor and gearhead and efficient attachment of motor instruments. Shorter installation length for greater flexibility when mounting. Helical-toothed precision planetary gearheads for extremely quiet and low-vibration operation reduce operating noise to very low levels.

Source: Schmale Maschinenbau GmbH

## Applications

The compact TPM+ power drive unit easily copes with highly dynamic linear applications with rack and pinions or spindles as well as in rotary movements with high masses and disturbing forces.

# Servo actuator options

## Increased corrosion protection

All actuators of the “TPM+” product range are optionally available with increased corrosion protection.

### Versions

1. Chemically nickel-plated gearbox housing.
2. Stainless steel output flange and shaft nut.
3. Small external screws made from stainless steel.
4. Additional U-seals on the external screws.
5. Important: No index bore in output flange.
6. Base (chemically nickel plated) for integral socket with laser-marking of identification plate.
7. Versions are generally equipped with straight integral socket only.
8. The TPM+ is completely painted with a highly resistant, two-component material on epoxy resin basis.

Colors: - Ultramarine blue silk matt (RAL 5002)  
 - Papyrus white silk matt (RAL 9018)

### Fields of application

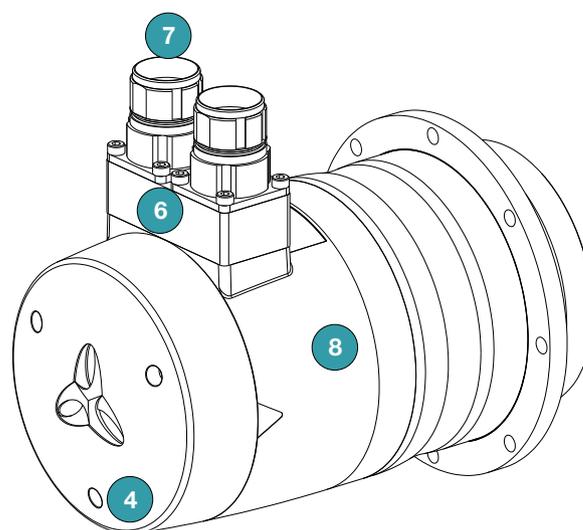

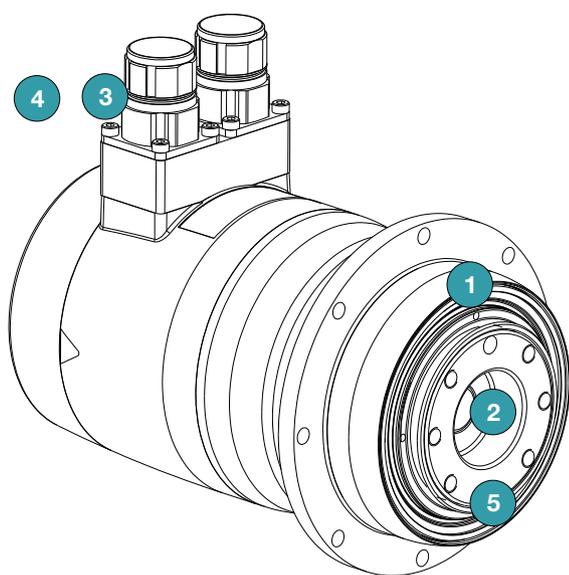

- Outdoor use in barriers, conveyors etc.
- Packaging machines, outside of the food sector.
- Textile machines.
- Pharmaceutical plants, outside of the medication sector.

### Resistance

- To water and moisture.
- Restricted due to cleaning agents, especially under extended exposure period. Successful tests with Oxofoam VF5L (Johnson Diversey) and Ultraclean VK3 (Johnson Diversey).
- Further cleaning agents can be qualified on request.

### Protection class

Against spray water: IP66

# Options

## Holding brake

A compact permanent magnet brake is fitted to secure the motor shaft when the actuator is disconnected from the power.

Characteristics include no torsional backlash, no residual torque when the brake is released, unlimited duty cycles at zero speed and a constant torque at high operating temperatures.

Size dynamic		004 and 010	025	050 and 110
Holding torque at 100°C	Nm	1.1	4.5	13
Power supply	V DC	24 +6% / -10%		
Current	A	0.42	0.42	0.71

Size power		004	010	025	050	110
Holding torque at 100°C	Nm	1.1	4.5	13	23	72
Power supply	V DC	24 +6% / -10%				
Current	A	0.42	0.42	0.51	1	1.2

Size high Torque		10		25		50		110	
Ratios		22 - 110	154 - 220	22 - 55	66 - 220	22 - 55	66 - 220	22 - 88	110 - 220
Holding torque	Nm	4.5	1.8	13	4.5	23	13	72	23
Power supply	V DC	24 +6% / -10%							
Current	A	0.42	0.42	0.71	0.42	1	0.71	1.2	1

In the case of high ratios, the holding torque is reduced by the manufacturer, if necessary, in order to prevent damage to the gearbox. The exact holding torques at the output can be found in the relevant data tables for the actuators, e.g. TPM\* power 110 2-stage.

Please refer to our project planning note on page 67.

## Temperature sensors

Different sensors are available to protect the motor coil from overheating.

Standard: PTC resistor, type STM 160 according to DIN 44081/82  
PTC resistor, type KTY 84-130

## Encoder systems

A selection of encoder systems is available for positioning and speed measurement.

Standard: - Resolver, 2-pole, 1 sin/cos cycle per rotation  
Optional: - Single-turn, EnDat 2.1 with 1  $V_{SS}$ , 512 S/R  
- Multi-turn, EnDat 2.1 with 1  $V_{SS}$ , 512 S/R, 4096 R  
- Hiperface, single-turn, 128 S/R  
- Hiperface, multi-turn, 128 S/R, 4096 R  
- TTL incremental encoder with hall signals and rectangular incremental signals 2048 S/R  
- On request:  
- DRIVECLiQ  
- EnDat 2.2  
- Hiperface DSL

## Cables

For selected servo controllers (see page 64), pre-assembled cables are available in pin assignments 1 and 4 (see page 57/58), in lengths of 5, 10, 15, 20, 25, 30, 40 and 50 meters.

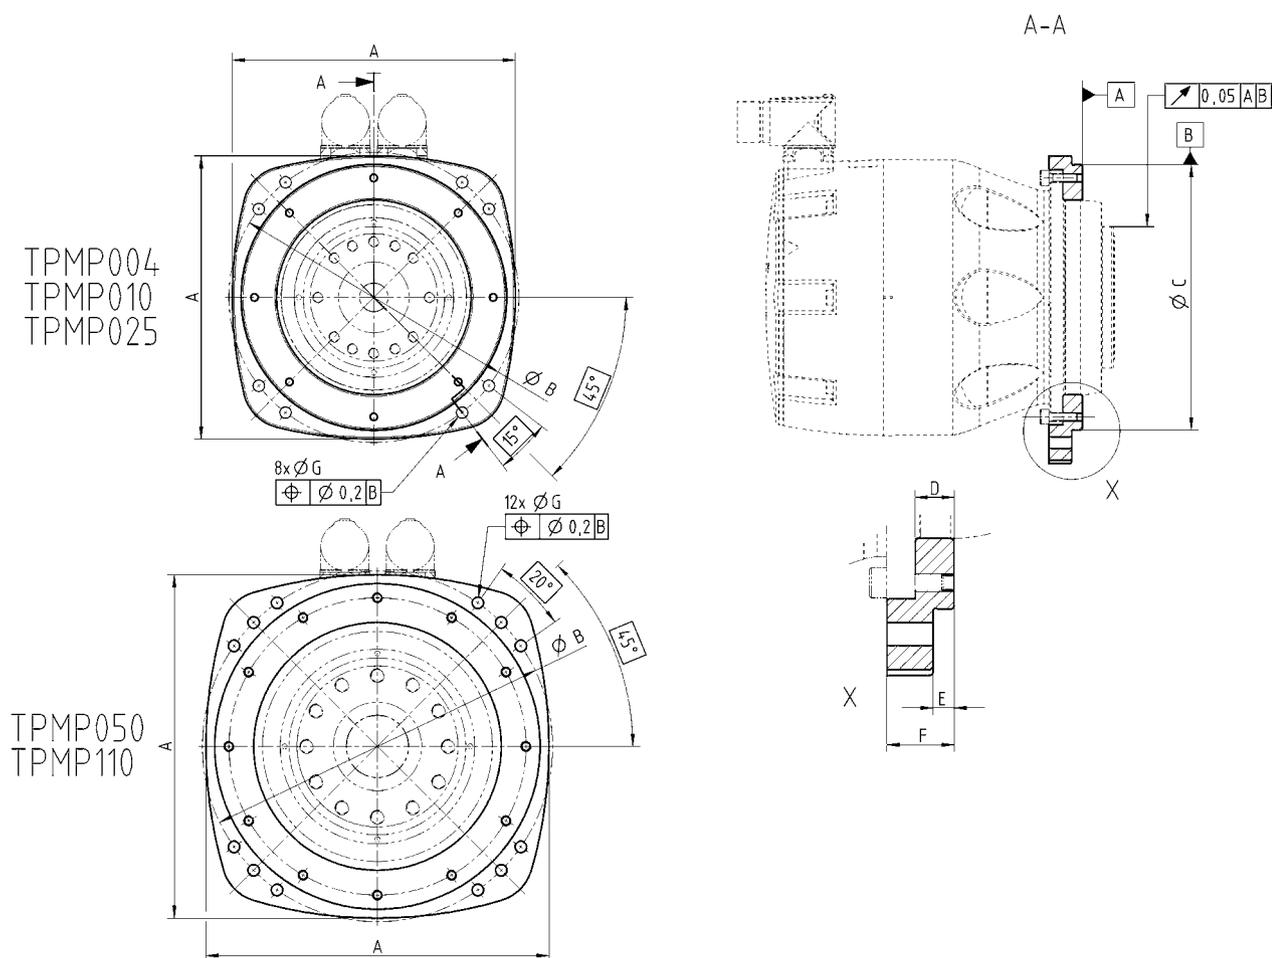

The cables are of the highest quality:

- Compatible with drag chains using highly flexible lines as specified in DIN VDE 0295, Cl. 6
- Oil and flame-resistant
- Free from halogen, silicone and CFCs

# Options

## Adapter flange for the TPM+ power

In certain installation situations, the flange bores must be accessed from the rear, for example. For this purpose, an adapter flange with a large hole circle is available for the TPM+ power. The flange is already fitted to the actuator on delivery.

	TPM+ power 004	TPM+ power 010	TPM+ power 025	TPM+ power 050	TPM+ power 110
A	105	130	160	194	268
B	105	133	164	198	273
C	92 h7	120 h7	150 h7	184 h7	252 h7
D	8	10	11	14	16
E	5	5	6	7	8
F	12	17	19	24	28
G	4.5	5.5	5.5	6.5	9

## Pin assignment 1

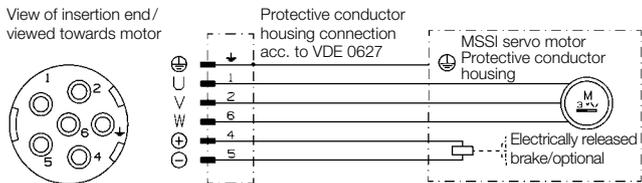

### Version with resolver, size 1

Integral power socket: speedtec, BED size 1, Intercontec 6-pin, pin contact  $\varnothing$  2 mm

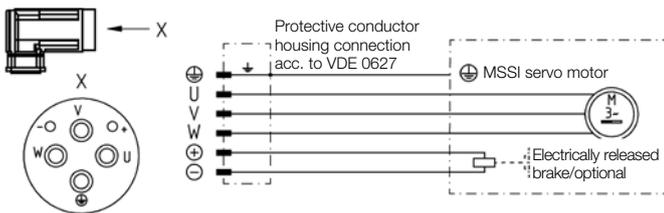

### Version with optical sensor, size 1

Integral power socket: speedtec, BED size 1, Intercontec 6-pin, pin contact  $\varnothing$  2 mm

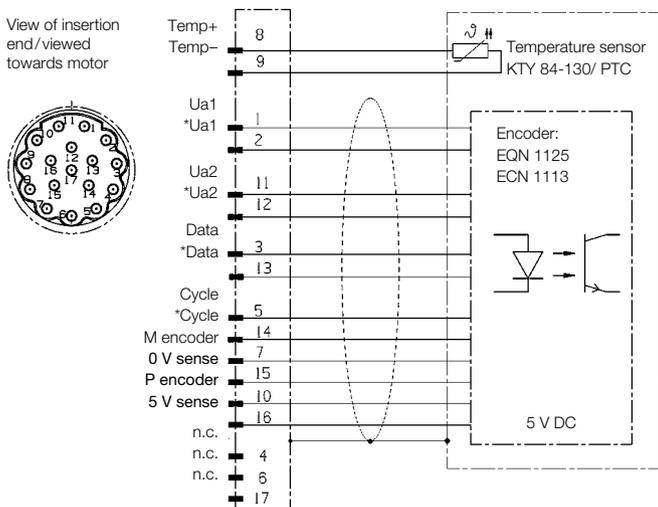

### Version with resolver or optical sensor, size 1.5

Integral power socket: speedtec, CED size 1.5, Intercontec 6-pin, pin contact 4 x 0.36 mm and 2 x  $\varnothing$  2 mm

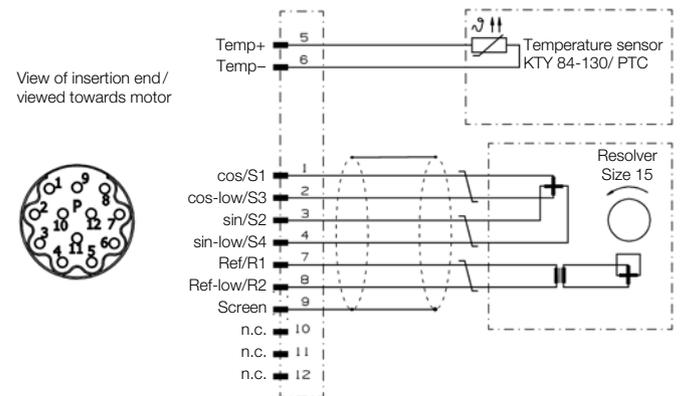

### Options "S" and "M"

Integral signal socket: speedtec, AED size 1, Intercontec 17-pin, E-part, pin contact  $\varnothing$  1 mm, housing code 0°

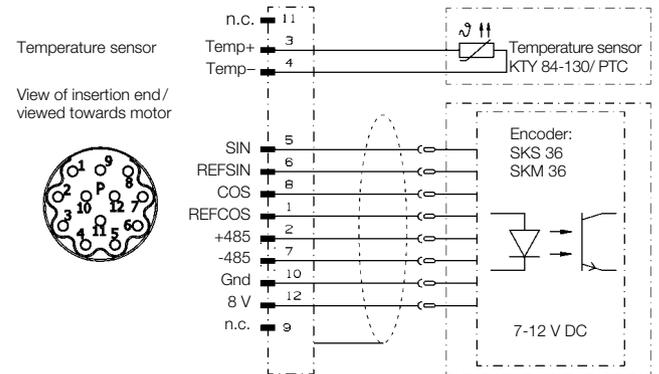

### Option "R"

Integral signal socket: speedtec, AED size 1, Intercontec 12-pin, P-part, pin contact  $\varnothing$  1 mm, housing code 0°

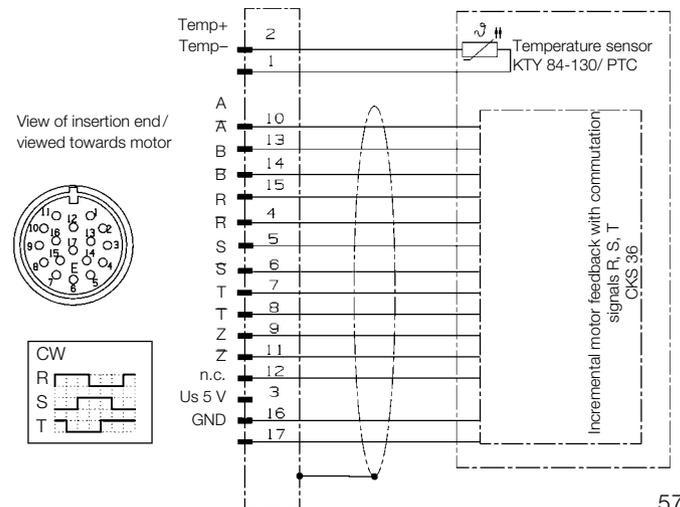

### Options "N" and "K"

Integral signal socket: speedtec, AED size 1, Intercontec 12-pin, P-part, pin contact  $\varnothing$  1 mm, housing code 0°

### Option "T"

Integral signal socket: speedtec, AED size 1, Intercontec 17-pin, E-part, pin contact  $\varnothing$  1 mm, housing code 0°

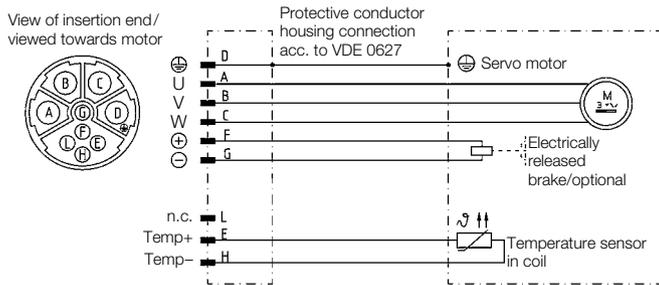

# Options

## Pin assignment 4

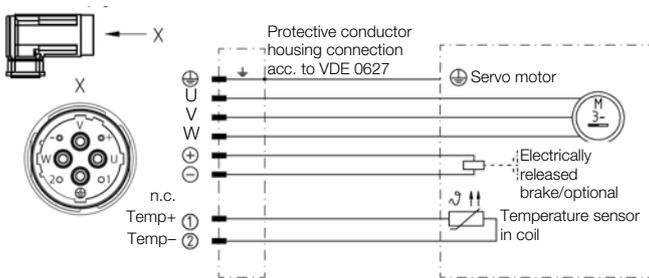

### Version with resolver and optical sensor, size 1

Integral power socket: speedtec, BED size 1, Intercontec 9-pin, pin contact 4 x  $\phi$  2 mm + 5 x  $\phi$  1 mm

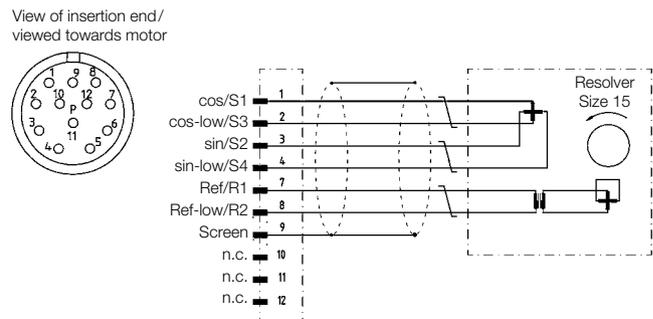

### Version with resolver and optical sensor, size 1.5

Integral power socket: speedtec, CED size 1.5, Intercontec 8-pin, pin contact 4 x  $\phi$  2 mm + 4 x  $\phi$  2 mm

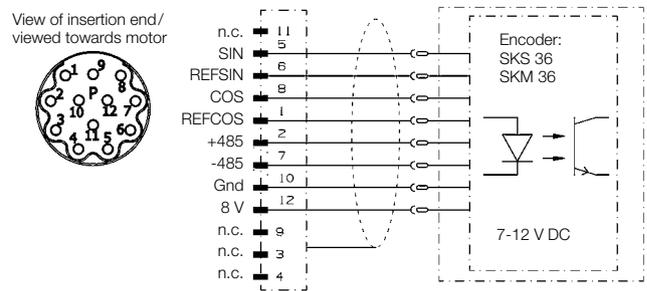

### Option "R"

Integral signal socket: speedtec, AED size 1, Intercontec 12-pin, P-part, pin contact  $\phi$  1 mm, housing code 0°

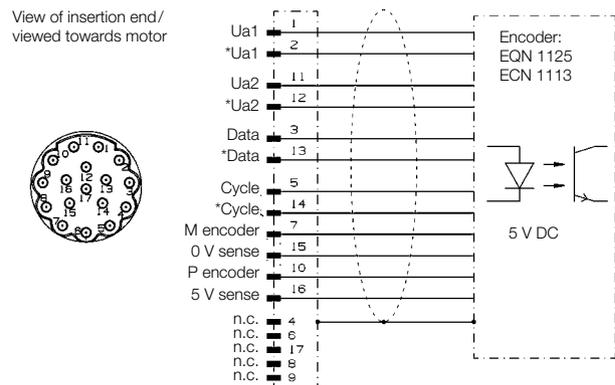

### Options "N" and "K"

Integral signal socket: speedtec, AED size 1, Intercontec 12-pin, P-part, pin contact  $\phi$  1 mm, housing code 0°

### Options "S" and "M"

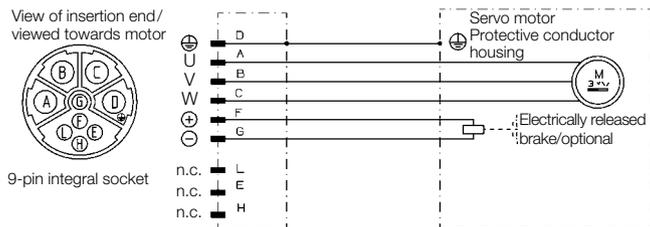

Integral signal socket: speedtec, AED size 1, Intercontec 17-pin, E-part, pin contact  $\phi$  1 mm, housing code 0°

## Pin assignment 5 only for TPM+ dynamic (Rockwell-compatible)

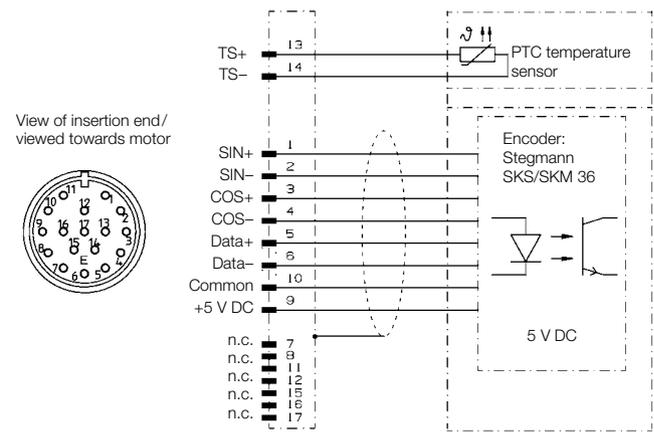

### Version with optical sensor

Integral power socket: speedtec, BED size 1, Intercontec 9-pin, pin contact 4 x 0.2 mm + 5 x 0.1 mm

### Options "E" and "V"

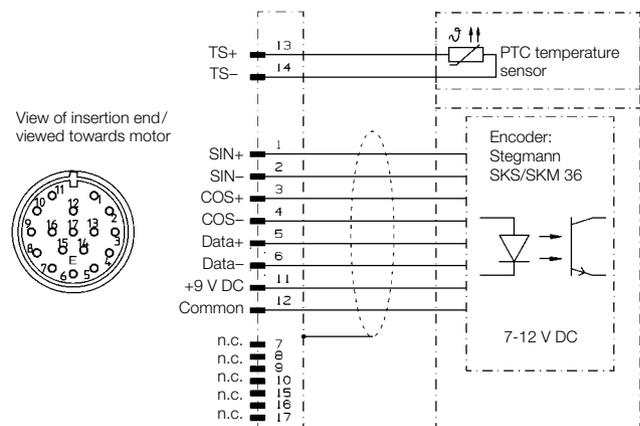

Integral signal socket: speedtec, AED size 1, Intercontec 17-pin, E-part, pin contact 0.1 mm, housing code 0°

On TPM+ dynamic sizes 004, 010 and 025 with 320 V intermediate circuit voltage.

### Options "E" and "V"

Integral signal socket: speedtec, AED size 1, Intercontec 17-pin, E-part, pin contact 0.1 mm, housing code 0°

On TPM+ dynamic with 560 V intermediate circuit voltage.

Recommended cable cross sections according to EN 60204-1, ambient temperature 40°C, laying system C.

The selection of cable cross section depends on the motor size and stator length.

# Project planning

## Servo controllers

TPM<sup>+</sup> actuators can be operated using many different servo controllers. The table below contains a selection of servo controllers already tested with the TPM<sup>+</sup>. It also provides information to assist in selecting the correct options. You can request a set of quick start instructions containing all the most important information for parametrizing the servo controller. Please observe the current consumption of the actuator during selection of the servo controller used.

<sup>3</sup> up to 10 A<sub>eff</sub> rated current

## Technical data

Symbol	Designation	Unit
$T_{2dyn}$	Dynamic load torque	Nm
$T_{2Pr}$	Process load torque	Nm
$T_{2b}$	Total load torque at gearhead output	Nm
$T_{1b}$	Total load torque at motor	Nm
$T_{Mmax}$	Maximum acceleration torque of motor	Nm
$T_{2B}$	Maximum permissible acceleration torque at gearhead output	Nm
$T_{20}$	Permanent static torque at gearhead output	Nm
$M_{2k}$	Tilting torque at gearhead output	Nm
$M_{2k max}$	Maximum permissible tilting torque at gearhead output	Nm
$J_L$	Mass moment of inertia of external load	kgm <sup>2</sup>
$J_1$	Mass moment of inertia of drive (motor side)	kgm <sup>2</sup>
$i$	Gearhead ratio	–
$\eta$	Gearhead efficiency (1-stage 0.97 / 2-stage 0.94)	–
$\alpha$	Acceleration of external load	rad/s <sup>2</sup>
$n_{2B}$	Speed limit* for $T_{2B}$	rpm
$n_{2max}$	Maximum permitted output speed	rpm

\* The maximum acceleration torque available at the gearhead output decreases if speed limit  $n_{2B}$  is exceeded.

# Project planning

## Acceleration and tilting torque design instructions

To fully utilize gearhead actuators from the TPM+ product range, please check the maximum permissible acceleration torques with reference to the following points:

Calculate the maximum acceleration torque required at the gearhead output:

$$T_{2dyn} = \alpha * J_L$$

Identify additional process loads and calculate the total load torque at the gearhead output:

$$T_{2b} = T_{2dyn} + T_{2Pr}$$

Then calculate the total load torque required at the motor:

$$T_{1b} = (\alpha * J_L + T_{2Pr}) * \frac{1}{\eta * i} + \alpha * i * J_1$$

To fully utilize the gearhead actuator during acceleration, the following conditions must be adhered to:

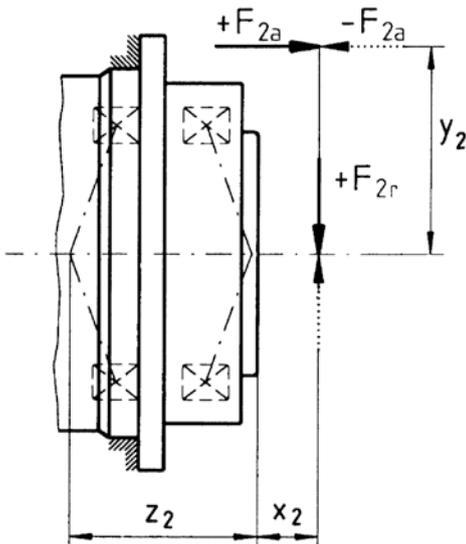

Condition for the total load torque at the gearhead output:

$$T_{2b} \leq T_{2B}$$

Condition for the total load torque at the motor:

$$T_{1b} \leq T_{1Mmax}$$

In addition, the tilting torque produced from prevalent radial and axial forces must be determined and compared with the permissible value:

$$M_{2k} = \frac{F_{2a} * y_2 + F_{2r} * (x_2 + z_2)}{1000}$$

$$M_{2k} \leq M_{2Kmax}$$

Please refer to the table below for values corresponding to  $z_2$ :

TPM <sup>+</sup> dynamic	004	010	025	050	110
$Z_2$ [mm]	57.6	82.7	94.5	81.2	106.8

TPM <sup>+</sup> high torque		010	025	050	110
$Z_2$ [mm]		82.7	94.5	81.2	106.8

TPM <sup>+</sup> power	004	010	025	050	110
$Z_2$ [mm]	57.6	82.7	94.5	81.2	106.8

TPM <sup>+</sup> endurance		010		050	
$Z_2$ [mm]		82.7		81.2	

If you require a more complex design, in particular the thermal characteristics of our drives, we recommend analyzing the drive train using our design software cymex®.

## Project planning note on brakes

The holding brakes installed in the actuators are subject to various influencing factors, e.g. the oxidation of abrasion particles, the flattening of friction surfaces in the case of frequent brake action at the same position, or the wear-dependent changes to the air gap. This can result in a reduction of the available holding torques. All the holding torques indicated therefore apply for the ideal state under optimal conditions, without damaging influences.

Such influences can be countered by means of a regular brake refresh cycle. For detailed information on the recommended refresh cycles, please refer to our Instructions for Use. For critical applications, it is recommended to ensure sufficient design safeguards with regard to holding torque in order to take into account the above-mentioned uncertainty factors. Our in-house engineering department will be pleased to assist you with the application sizing.
